

## METLAM AUSTRALIA STAINLESS STEEL PRODUCT CLEANING AND MAINTENANCE GUIDE

- \* Before commencing any cleaning regime, remember to disconnect any electrical cables.
- \* Metlam stainless steel products look best when cleaned regularly with a clean damp cloth.
- \* Drying afterwards makes sure streaky marks aren't left behind.
- \* Routine cleaning prevents any stubborn stains from building up and ensures best results on finish.

### WHAT TO USE

For everyday cleaning, wipe the surface with a damp soft cloth or sponge. You may also use a mixture of warm water and mild Neutral pH soap or detergent (such as PZ Cussons Morning Fresh).  
***After cleaning, wipe the surface dry with a soft absorbent cloth.***

### AVOID SCRATCHES

Stainless Steel can be scratched by careless handling or aggressive scrubbing. Avoid dragging rough items across the surface and be aware that grit, trapped under other materials, can actually cause surface scratches.

### CHEMICAL REACTION

If left in contact with salts or acids for extended periods, Metlam Australia Stainless Steel products may be compromised. Applying regular hygiene measures, like a maintenance/cleaning schedule, will minimise any potential problems.

Using incorrect cleaning products can damage your Metlam stainless steel product and void the [warranty](#).

### AVOID:

- \* **Rubbing with steel wool (wire wool) or scraping with steel tools**
- \* **Using scourers and cleaning cloths that have been used on ordinary steel**
- \* **Rubbing plastic scourers across the grain of brushed surfaces**
- \* **Using concentrated bleach or hydrochloric acid-based cleaning products**
- \* **Contact with products containing chlorine bleach, hydrochloric or muriatic acid**
